

OĞUZ ERDAL

Front-end Developer

I love solving problems and designing software components with long term maintainability. I'm also excited and curious to learn and try new developments.

PERSONAL PROJECTS

E-commerce Web Application Using Angular 8

- JWT Authentication, Admin panel Auth Guard, shopping cart structure, fake API Json-Server, order models are some features of the project.

Enhancing Banking Web Applications

- I designed new screens for bank operators to use and improved existing screens using JQuery grid Ajax and Bootstrap. In the virtual pos project, we used Angular 8, Angular Material, SASS.

Special Domain Name

- A system that records users' addresses and similar personal information on the domain names they can purchase and use them on other platforms only with their private domain names. (MS SQL, Asp.net WEB API, Vue.js Cli, Bootstrap)

Consulting Web Platform for Astrologers and Clients

- A platform that provides consultancy services with chat and video streaming systems, as well as where astrologers can post their blogs and videos. (MS SQL, Asp.net MVC, Bootstrap)

Web Interactions with Selenium Framework

- Saving tweets to a file using HTML elements according to a certain hashtag with Selenium framework and integrating this feature for other projects.

WORK EXPERIENCE

Front-end Developer

Mynkey

03/2021 - Present

Etiler, İstanbul, Turkey

Mynkey develops end to end, value added travel services for your "Peace of Mind" during your travels.
