YUSUF KUMRAL

Having 2 years of mobile application development experience, have knowledge of data structures and a good software infrastructure, able to create algorithms, likes to think analytically.

EXPERIENCE

February 2019

Mobile App Development

- Java/Kotlin Mobile App Development

I have 1 application that I have programmed in Kotlin language and presented in Google Play Store,

Apart from this, I have had different projects (Java/Kotlin) for self-improvement, but I didn't publish them and in the process many modules like MVVM, Multithreading (RxJava) I got experience about. I am capable of translating any interface I see into XML format.

• My Notifications (Notification Logger)

URL: https://play.google.com/store/apps/details?id=com.dimensions.mynotifications

Description: It saves the notifications falling into the notification in the SQL database and allows you to see your notification history

- React-Native Mobile App Development

I have the capacity to convert any interface design I see into javascript code.

I am easily familiar with this framework as I have 2 years of mobile application development experience.

I've been can do almost any app that comes on demand

Briefly my all work experience

Kotlin/Java

• MVVM
• Multithreading (RxJava)
•Room
•Navigation
•Retrofit Rest API Call
•Lifecycle

JavaScript (React-Native)

•Navigation / TabNavigation
•Rest API
•Real-Time data interaction (Socket.io)
•Redux
•Lifecycle
•Custom Component
•Animator
