AWS SOLUTION ARCHITECTURE

OBJECTIVE

A motivated individual with in-depth knowledge of languages and development tools, seeking a position in a growth-oriented company where I can use my skills to the advantage of the company while having the scope to develop my own skills.

EXPERIENCE

PHP LARAVEL DEVELOPER
STEPGROUP Gaziantep
(2017-07-01 to 22-03-2020)

Projects:

1- ERP Solution system:

in this project I worked with lumen framework as a backend framework and REACTJS in front end and this project was depends on multitenancy database which let each user to work on itself database and it was also served as SAAS (software as service) and it let each user to get membership and buy the solution automatically.

2- LMS Solution:
This project is belonging to English academy in Saudi Arabia which is has millions of students and it called: English place (www.englishplace.net) and in this project we have made a full integrated solution for e-learning Including one to one calls and virtual classes.

in this project I worked on two important modules one is Sales and the other is Reporting module which is built based on Business Intelligence, in Sales module I worked on many payment gateways like(PayPal ,

hyper pay) and I made also the required APIS for mobile app.
And in this project we used angular js and in front end and Laravel framework in backend.

3- AWS Architecture:
In the two projects above and according to cloud solution on client request I used many of Amazon web services smartly for example in ERP solution I used to sent notification to customer when his invoice is ready, and by using multitenancy it was very interesting to use SNS too send notification and handle the messages by SQS , and in the other project I worked on preparing RDS database to handle the huge traffic on database and I used S3 with CloudFront to make the assets loading and files x20 faster , and in addition I prepared an EC2 instance with apache2 and phpMyAdmin with configuring Autoscaling and load balancer to handle high traffic on website, beside that I configured also a DynamoDB as session driver and elasticache as cache driver and in reporting modules I used QuickSight BI to Make business insights and dashboards and embedding the dashboards in website admin panel and by doing all of above services I could delivered a full integrated cloud solution by using all possible services to be used with Laravel framework.

Projects :

1- CRM and appointments management system :
This project was built to a tax advisor company in Germany (http://steuerberatung-bicer.de/)
And in this project I made a full solution SEO friendly to manage a tax advisor company like (auto making task for employees when customer send a file or email and auto assign a task also when customer make an appointment to consulting on the website , I made also a module for managing customer documents)

2- charitable organization management system :
this project was for large organization in Germany and I built it following multi tenant traits in Laravel because this org. has many branches in Germany and each branch should have access on it data only and I integrate a payment gateway to collect donations and also I made a module for reporting and transfer donations between main branch and other branches.

Projects:

1- SEU Admission (SAUDI Electronic university) :
(https://admission.seu.edu.sa/)
In this project I made a system for student applications and admission system which take the setting and requirements from university and do student acceptance automatically by following many steps stating from check personal information for students by using API and also checking high school score and English exam score and do the acceptance process and send notification to students if their applications has accepted or no , then going on to payment process and doing the payment, and in this system I worked with oracle database and it has high performance dealing with more than 130,000 students and assigning the suitable seat for each student without any error.
